## Development

### Meet the *cisTEM* Development Team

**Johannes Elferich**

**Tim Grant**

**Niko Grigo**

#### Previous Developers and Contributors

We are grateful to our previous developers and contributors who were involved in creating and enhancing *cisTEM*. A list of previous developers can be found [here](#).

#### Developmental Versions

Users are welcome to download, install and use developmental versions of *cisTEM*. These versions implement new features, some of which published, others still being developed and

unfinished. However, they are generally less well tested and may lead to unexpected results. Users are therefore advised that they use developmental versions of *cisTEM* **at their own risk**. *cisTEM* databases **should be backed up** before opening them with a developmental version.

We are **not able to provide support** for developmental versions. Please access the version published in [Lucas et al. \(2021\)](#) [here](#). More recent versions can be downloaded from the *cisTEM* repository [here](#). Further information and documentation on the latest developments can be found [here](#).

Below are snapshots of developmental versions that have been compiled statically to run on most systems without requiring compilation.

## Statically Compiled Versions

 [cisTEM-2.0.0-alpha-183-e549844-20231205.tar.gz](#) (Latest version, use for single-particle processing and 2D template matching)

 [cisTEM-ctffind5-b21db55.tar.gz](#) (Version with CTFFIND5 as described in Elferich et.al. 2024)

 [cisTEM\\_2-alpha-166-325181e.tar.gz](#)

 [cisTEM-2.0.0-alpha-70-d11eb1e.tar.gz](#)

 [cisTEM-lucas-et-al-2022.tar.gz](#)
