How to export the list of rejected mirographs or a group into a text file

Hi,

I have cleaned up my data by manual inspection and removed bad micrographs into a new group and used the invert of the group to proceed with the processing. However, I would ideally like to do processing on the same dataset in relion (by removing the same bad micrographs). I can do that if I can get hold of a text file that has the details of the all the micrographs that have been removed by me earlier in cistem. Is it possible to generate such a list somehow?

Regards,

Abhinav.

timgrant

Hi Abhinav.

I believe what you want to do is described on this page :-

http://cistem.org/documentation#tab-1-16 under "Images in a Group".

please let me know if that's not what you want!

Tim
