cisTEM GUI crash when openning a project

Hello,

I found some problem when I attempt to re-open a project after running 2D classification a dialog showed as follow:

```
Database is marked as owned by :-
PID : 31951
Host : localhost.localdomain
Each database should only be opened by one instance of
cisTEM at a time, otherwise corruption is possible. If
it exists, you should close the other instance before
continuing, if this message is the result of a crash
etc. then you can overide and continue.
Do you want to overide?
```

I choosed to override and the dialog appear again. When override was chosen again, the GUI crashed and erro message on terminal showed as follow:

```
Oops. Could not find array position of asset with ID
37246Segmentation fault (core dumped)
```

I've tried to restart the machine and ensured nobody else is accessing to this project.

How can I recover my database form this issue?

Thanks

Yitian Luo

timgrant

Hi,

Hi,

Can you see if you are affected by the bug described here :-

https://cistem.org/database-issue-after-cistem-crash

If that does not solve your problem, please let me know so I can look into it further.

Thanks!

Tim
