cisTEM crash

Hi,

I started an Ab-initio 3D construction and the cisTEM GUI crashed. On restarting it and loading any of my project files it did not start and said:

SQL Error: disk I/O error

Trying to execute the following command :-

BEGIN IMMEDIATE;

From core/database.cpp:33

int Database::ExecuteSQL(const char *)

Aborted (core dumped)

Everytime I am trying to load my files in cisTEM, it is saying the same.

what should I do?

Thanks,

Richa

timgrant

Hi Richa,

Hi Richa,

This usually means you have run out of disk space - is that the case here?

Cheers,

Tim
