focused classification radius missing in records

I ran an focused classification and it went well. But in the results section, there is no display on sphere radius. It might be just a minor bug on query the database.

Jian

Hi Jian,

Hi Jian,

Yes this bug is fixed for the next release. It is a problem with displaying the information - the radius is stored correctly in the database and you can access it directly with database reads if you need it.

Thanks for pointing it out!

Tim
