Problem for downloading tuto data

Hi

not really a major issue but ... tuto are still useful to start learning and quick testing an install on a new machine

I tried with several machine on different connection points

when trying to dl the data for the tutorial the connection is cut before the end of the download

apparently the server don't allow the resume with wget or curl

Would it be possible to share this data on a more handy way or at least to allow the resume ?

Best

niko

Please download the dataset from the EMPIAR database (link right above the download link you tried).
