Problem for downloading cistem-1.0.0-beta-intel-linux.tar.gz
(recommended)

Hi,

when trying to dl the file the connection is cut before the end of the download. I tried with several machine on different connection points.

apparently the server don't allow the resume with wget or curl. I can download the source code though...

Best

timgrant

Hi,

Hi,

A couple of us just tried to download it, and it worked - can you try again in case it was a glitch and see if it works?

Thanks,

Tim

Hi,

Hi,

Thanks for the quick reply.

It is weird that the download failed each time after 100Mb be downloaded. I also ask my friend to try to download it and the same thing happened. I've tried more than 10 times in different periods of the day.

Is there a special way to download it or share it in a different way? Sorry, I am not a computer expert. Most of the time, I just open chrome or Firefox of my windows system and click the link. I also tried a Mac, with chrome or curl command...

I tried to compile the source code which I can download, but it is too complicated...

Thanks,

timgrant

Hi,

Hi,

That is really strange, where are you phycially located?

Tim

Hi,

Hi,

I am at Madison WI. (Welcome to UW Madison as a PI.)

I just have a chance to remote the lab computer and downloaded it successfully! Guess it is my internet problem.

Thanks anyway.

Lei
