Error during movie alignment

Hello all,

I got the following error during the alignment of movies.

  error, cannot open file (/dev/null)

Though the job finished aligning all the movies, but not able to terminate the job.

Is it because of insufficient memory?

When I tried to bin during importing, it does not have any error.

Thanks

timgrant

the /dev/null is an error you

the /dev/null is an error you can hopefully ignore. IF it runs on bin samples, it may be a memory problem.

How many processes are you using? You may need to use less.

Thanks,

Tim

Error during movie alignment

It is related to summed images to display in GUI. No, error with summed images for display checked.

Are aligned images are dose weighted as I provided the dose per frame during the import of movies?

Thanks

timgrant

They are by default, you can

They are by default, you can turn this off an expert option.

Tim

restarting the job

Is there a way to restart the same job that was stopped due to rebooting of the system?

timgrant

No, results are not stored

No, results are not stored until a job completes. so if it dies partway through it has to be run again. Once finished, the results will be saved.
