Compiling cistTEM 2.0 alpha version

Hi all,

I am trying to compile the cistTEM 2-alpha from the Github repository.

I tried the following.

```
>> aclocal
```

```
>> autoconf configure.ac
```

However, I cannot generate the configure file. Any pointers?

I also tried cistTEMx fork from Ben without much success! So I am very sure I am stupidly missing something!

I appreciate the help!

Best,

Sagar

timgrant

Hi,

Hi,

If you run the `reconfigure_project.b` script in the top level directory, this should generate the configure.

Thanks!

Tim
