How to import data from Relion?

I am not sure what is particle stack filename when I import data from Relion. I can find the star file from Relion, for example from `select/job**/particles.star`. Cistem needs the *.mrc for the particle stack filename, but the particles.star comes from many mrc files. I feel confused. Thanks a lot.

niko

You will probably have to

You will probably have to create a stack using `relion_stack_create`. This will produce files you can import into *cisTEM*. Please consult the Relion documentation for further information about how to use `relion_stack_create`.

Thanks

I will try it. Thank you so much for your reply.
