Database broke after editing picks manually

Dear cisTEM team,

after I edited the picks manually (deleting and editing) on my micrographs I tried to create a new refinement package. Upon this the cisTEM gui crashed:

```
(cisTEM:13787): Gtk-CRITICAL **:  
IA__gtk_tree_row_reference_new_proxy: assertion 'path->depth > 0'  
failed
```

```
(cisTEM:13787): Gtk-CRITICAL **:  
IA__gtk_tree_row_reference_new_proxy: assertion 'path->depth > 0'  
failed  
Calling DrawOrthViews  
Calling DrawOrthViews  
Calling DrawOrthViews  
Calling DrawOrthViews  
Error: mode 32604 MRC files not currently supported
```

When I tried to restart cisTEM it won't allow me to open the corresponding database - by clicking on the last sessions link or by selecting it in the browser (open database). The error that I get and the gui instantly crashes:

```
Gtk-Message: Failed to load module "pk-gtk-module"  
Gtk-Message: Failed to load module "canberra-gtk-module"  
Oops. Could not find array position of asset with ID 28996  
Segmentation fault
```

many thanks for your help

cheers

Arne

timgrant

Hi Arne,

Hi Arne,

You are probably having the problem mentioned here :-

<https://cistem.org/database-issue-after-cistem-crash>

Can you let me know if that fixes your database?

Cheers,

Tim
