Error message during AutoRefine

Dear cisTEAM,

During an AutoRefine run in iteration 5 out of 20 I got an error message after the "calculating reconstruction step" saying,

error: mode 32618 MRC files currently not supported.

The GUI then immediately aborted. When trying to open the already calculated volumes in chimera I get an error message saying that "file size is too small for grid size". Any suggestion if the already calculated volume can be used? Or should I retry the AutoRefine run?

Best,

Rasmus

timgrant

Hi Rasmus,

Hi Rasmus,

This sounds like something went wrong and the volume was not correctly written (is it possible you ran out of disk space in the scratch directory?)

I think you will have to retry the run - sorry!

Tim

rasmuskf

Hi Tim,

Hi Tim,

Disk space shouldn't be a problem. But out of curiosity, is there a way to see cisTEM's memory requirements for 3D refinements/classifications? The box sizes I use for my particles are in the 512-700 pixel range (1.1 Å/pix) and especially when I ask for multiple 3D classes it happens to me that the GUI suddenly aborts without providing any error messages.

Best,

Rasmus

timgrant

Hi Rasmus,

Hi Rasmus,

I think the memory usage should be less than $4 * \text{the 3D size}$ at most PER process. So for 700 pixels, it would be ~5.2GB per process.

Tim

zz2629

error in 3d refine

Hi Tim,

Thank you very much for the reply. I am using OpenSuse 15.0. When I run 3d refine I get this error msg:

Refine3D: Normal termination

100% [=====] done! (1h:32m22s)

Refine3D: Normal termination

"Error: mode 32542 MRC files not currently supported" During CTF

Hello,

I am getting a similar error that Rasmus posted about back in 2018 when I run Find CTF.

This is happening with a small data set from at 200keV Negative Stain, so I don't think memory space is an issue.

Any advice on how to proceed?

The error:

Error: mode 32542 MRC files not currently supported

JOB CONTROL : GUI Socket Disconnected!!

/programs/share/capsules/lib/job.sh: line 120: 9702 Aborted

"\$SB_EXECFILE" "\$@"

bests

Joana
