supported symmetries

Hi,

The cisTEM GUI says I can enter any valid point group symmetry instead of using the dropdown selections, but if I try to enter something not in the menu (like 222 point group symmetry), I am unable to continue building a refinement package. Am I doing something wrong, or is this a bug?

timgrant

Hi David,

Hi David,

You should be able to enter any valid pointgroup in Schoenflies notation, so for 222, it would be D2.

Cheers!

Tim

Thanks. You should add

Thanks. You should add "Schoenflies notation" to the GUI's information...
